

Online Essentials Of A Paediatric Clinical Assessment Course

Learning outcomes

At the end of the course, participants will be able to:

1. Articulate the anatomy and physiology of the body systems, highlighting differences across the age-span of a child.
2. More confidently perform a safe, evidence-based clinical assessment of a child.
3. Recognise abnormal findings and take appropriate responsive action to ensure best health outcomes for the child.
4. Recognise and utilise the important supportive role and resource of the principal caregiver during a clinical assessment.

Course content
