

Equity issues can make partnerships imbalanced

A partnership of research support professionals was formed (UCT, UCL & Wits)

Three datasets were used to distil equity issues arising during collaborative proposal development:

Outputs from British Academy 2024 Equitable Partnerships Workshop series

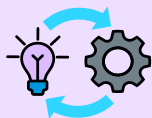

Insights from questionnaire completed by researchers & research support professionals to prioritise areas where inequity emerges

Themes arising from literature review of equity in research

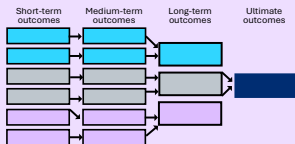

PREPARATORY DATA GATHERING & ANALYSIS

Using Implementation Science frameworks, potential interventions were characterised & implementation pathways mapped

Challenges were interrogated using Theory of Change to identify interventions to improve equity outcomes

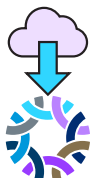

A toolkit of equity-enhancing interventions was conceptualised, with a subset developed, piloted & refined into practical tools

Key equity challenges were identified that arise during proposal development

SERIES OF ONLINE & FACE-TO-FACE WORKSHOPS

These practical tools are available for download and use by researchers & research support professionals

Using EquiPD equity tools can improve balance in partnerships
